Préime Skin Analyzer

Préime Skin Analyzer

Take photos and analyze reports with just one click, making it more convenient to operate

Handheld skin microimager

Multiple light source targeting analysis

Préime Skin Analyzer is an advanced skin analysis device:

- **Imaging:** 8 spectral imaging technologies for precise skin analysis.
- **Comprehensive Assessment:** evaluates 17 facial skin parameters, including pigmentation, wrinkles, pores, and hydration.
- **AI-Powered Insights:** enhances accuracy with AI-driven reports and predictive skin aging analysis.
- **Smart & Convenient:** features one-click operation, real-time reporting, and cloud data storage.

Skin Analysis Report

It offers three reporting modes:

1. Single independent reports
2. Comparative analysis
3. Comprehensive report with AI-driven insights and skincare recommendations.

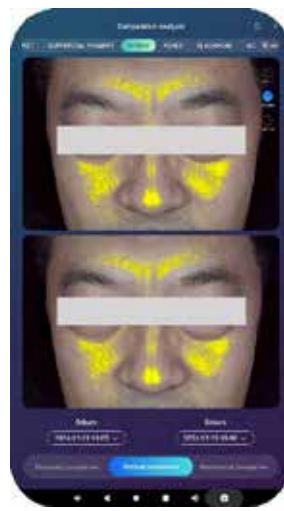

The system quantifies skin parameters through scores, levels, and area percentage, visualizing results with charts and multidimensional imaging to help users track changes and optimize skincare treatments effectively.

Three comparison modes

Parallel comparison

Vertical comparison

Comparison of 4 figures

Microscopic detection: Skin Microimager

Microscopic image presentation of skin detail problems.
