

PRÉIME®

NANOCOTAP

NanoTap Pen

An innovation in the field of aesthetics.

Préime NanoTap pen supports the application and absorption of cosmetic solutions.

Unlocking Skin's Potential

The micro-channels created by the Préime NanoTap pen tips allow skincare products to penetrate the epidermis, facilitating better absorption and maximizing the benefits of active ingredients. It doesn't puncture the skin, so it's suitable for more delicate skin types or sensitive areas.

Designed for surface-level treatments.

There is typically no downtime, making it ideal for people who want a quick boost with no recovery period.

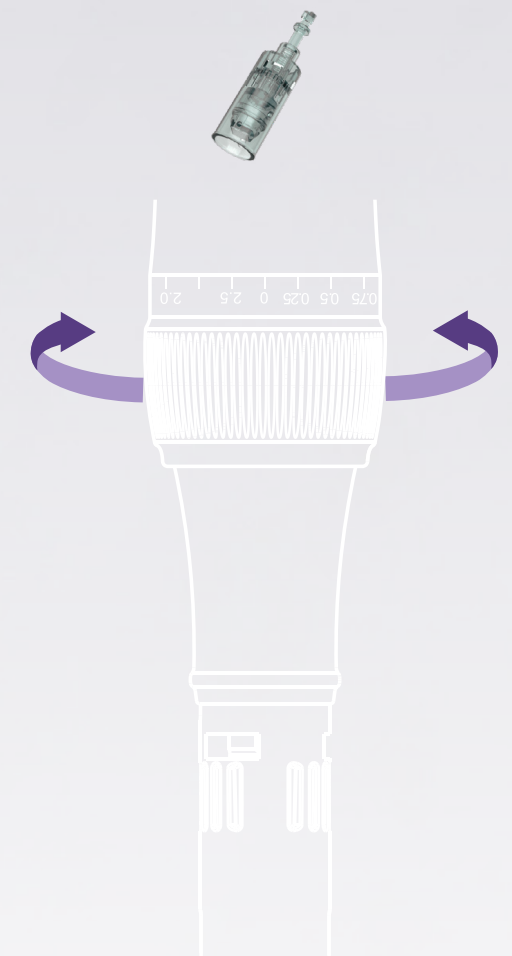

The precision of the Préime NanoTap pen allows for the even application of products, ensuring all areas of the skin receive the optimal concentration for visible improvements.

The NanoTap Pen uses very fine, non-invasive, nanosized metal tips instead of needles to gently tap the skin.

- ✓ Multiple cartridge options.
- ✓ Turn the tip counterclockwise.
- ✓ Cartridges are provided in sterile condition for single use only.

LED screen visual digital display
6 user-selectable speed levels
